Plugsensor Conjunto Básico

The **Plugsensor Conjunto Básico** is a climate measurement device equipped with integrated sensors to monitor variables such as temperature, humidity, precipitation, light intensity, UV index, gusts, wind direction, and wind speed. To operate, it must be connected to the Plugstation WS22, responsible for data processing and power supply, which can be provided via cable or solar panel. This equipment is ideal for applications in environmental monitoring with high precision and efficiency.
