## Divisor 4 Portas

The **Plugsensor Divisor 4 Portas** is an industrial hub designed to connect four or more additional sensors to the Plugstation WS22 module, expanding the capacity for climate data monitoring and collection. Utilizing the RS485 communication protocol, the device ensures a reliable and stable connection even over long distances, making it ideal for applications in precision agriculture, smart cities, and highways.

# Technical Specifications

Parameter	Description
Output Interface	RS485 (up to 4 outputs)
IP Rating	IP68
Installation	Direct connection
Dimensions	364 x 120 x 30 mm
Connector	Circular

Sensor available only for integration with the Plugstation starting from the WS22 model.
