

Plugsensor

Acionamento Temporizado

Plugsensor

Acionamento Temporizado

The **Plugsensor Acionamento Temporizado** is an electronic device that can be used to control alternating and continuous loads, enabling or interrupting the power supply through its terminals. Compatible with RS485 communication, it integrates easily with industrial and automation systems. For connection to the load, the actuator provides common outputs, normally open and normally closed, leaving it up to the user to choose the one that best suits the local need.

Technical Specifications

Parameter	Description
Model	Relay 1-485
Controller	STM32F030F4
Power Supply	12V DC
Output	NC / COM / NO
Maximum Load	10A 220VAC / 10A 30VDC
Baud Rate	9,600
Dimensions	83 x 26 x 17mm

Sensor available only for integration with the Plugstation starting from model WS22.
